## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 1, 7-15, and 17-19 are allowed over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

Holtzman et al. (U.S. Patent # : 6,621,804) teach a method for predicting a channel transmission slot, which reflects power level, for communicating non-voice data (best effort communication service) in conjunction with voice data. The prediction is made based on previously transmitted power level.

Chen et al. (U.S. Patent #: 6,763,244) teach a method for adjusting power using a control loop. Receive signal quality is measure and forwarded to the power controller for adjusting transmit power. The system calculates power surplus/deficit and determines step size for adjusting power to maintain the desired level of signal quality.

Chen (U.S. Patent #: 6,067,458) teaches a method of controlling power when a level of quality of service is required (i.e. data rate). The system estimates power level required to transmit data at the desired data rate.

However, the prior art made of records fails to teach or suggest the feature of the power levels allocated being related to a ratio of a link allocation interval to a power control command interval in combination with other limitations, as specified in the independent claims 1 and 15, and further limitations of their respective dependent claims 7-14 and 17-19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
